- **PATTERN** for text, search, url, tel, email & password.
- **PLACEHOLDER** for text, search, url, tel, email, password.
- **STEP** for number, range, date, datetime, datetime-local, month, time, week.
- **↓**
specifies the legal number intervals for an `<input>` element.

NEW IN HTML5

- semantic elements like `<header>`, `<footer>`, `<article>`, `<section>`
- form control attributes like number, date, time, calendar, range.
- graphic elements like `<svg>`, `<canvas>`
- multimedia elements like `<audio>` & `<video>`

By default, canvas has no border and no content.

Width and height of an attribute define the size of canvas.

We can have multiple canvas elements on one HTML page

`moveTo (x,y)` : defines starting point of line

`lineTo (x,y)` : defines ending " " "

Advantage SVG has over Flash is the compliance with other standards (XSL & DOM)

① Important property of template layout in CSS3. Display property

2. Correct mime type: text/html

3. Background-origin property describes which all positioning area of background images? Border-box, padding-box, content-box, inherit.

• Datetime supporting browser: Safari & Opera.

• Video formats in HTML5: mp4, ogg, webm

Audio " " " : mp3, ogg, wav

• Integer unit used for density of pixels of o/p device - dpi, dpcm, dppx

• Parameter of range: max min name step

• How to play flash format movie if video is not supported? <embed>, <object>

• RABA has full support for older browsers: False.

1) Grid templates are especially useful for designing elements that don't show simple relationships of which of the following?

☒ a) Immediate sibling

☒ b) Parent-child
